The MME Group is your reliable partner for Marine Surveys and Inspections

As one of the Worldleaders in **Ultrasonic Thickness Measurements**, Close-up Surveys and Steel Replacement Inspections, the Marine Services Division of the MME Group has served the shipping industry for more than 50 years.

MME has been engaged in international research projects and the implementation of better practices in the field of marine inspections for many years.

The ever increasing demand for better standards and higher quality in our industry in combination with improved efficiency has successfully been addressed by MME. The further digitising of the reporting processes, successful implementation of a Rope-Access Division and the advanced in-house training department are good examples of MME’s drive to perfection.

Apart from being one of the first companies in this field certified to ISO 9001 standards, MME also holds approval certificates from all major Classification societies in compliance with the Unified Requirements of IACS.

The MME technicians are specialists in their particular field of operation and are fully conversant with the applicable rules and requirements. They have the experience to assess the condition of steel structures and are capable of amending gauging patterns in order to obtain an accurate assessment.
The most important reasons to use the MME Marine Services Division for Ship surveys and structural assessments are

- As one of the pioneers in this field with 45 years of experience, MME has always remained at the forefront of this industry by continuous research and improvements.
- The experienced operators are not only capable of performing ultrasonic thickness measurements but can also conduct steel replacement surveys.
- In close cooperation with the other inspection divisions within the MME group all NDT techniques can be provided in the most efficient way.
- Close-up surveys can be combined with all types of video inspections thus allowing access to remote locations.
- Rope access by IRATA-approved inspectors provides you with the most cost-effective access to all structural components.
- MME reports are accepted by all classification societies and are considered as the highest standard in the industry.
- Your vessel will be measured without damaging the coating.
- Surveys can be carried out in ports (during most cargo handling operations), at shipyards (during or prior to repairs) and at sea.
- The MME qualified inspectors are always available, 7 days a week, 24 hours a day.
