Business excellence at heights
MME’s Business Card

The MME Group consists of three specialized operating companies with their own divisional structure. Material testing, inspection and corrosion prevention are the main activities. After a successful start in the marine industry the company has steadily expanded, allowing an optimum in synergy between these activities. After more than 50 years the vast knowledge and skills applied daily are still steadily increasing. A well devised certification structure guarantees our customers an accurate and professional execution of their orders. A Longer Life - that is the mission put into practice with our dedicated staff.

MME: leading through more than 50 years of know-how and experience

The MME Group is fully committed to Quality; from Laboratory Testing of materials to Non-Destructive Testing of installations or the Inspection of Ships, our experienced specialists with their modern equipment guarantee the highest standards of reliability.

The Training Centre is not only concentrating on a continuous improvement of the expertise of our own inspectors, but is also active in the transfer of knowledge to customer’s employees, classification societies and research institutions. All our services, products and systems for corrosion prevention, antifouling and corrosion- monitoring comply with the highest standards of industry and contribute to a lifetime extension of your investments.
Rope Access

Rope access is one of the safest and fastest methods of working at heights where ropes and other equipment are used to gain access to difficult to reach work locations, without the use of scaffolding, cherry pickers and platforms.

With the use of rope access techniques our technicians can ascend, descend and traverse to almost every imaginable work location, whilst suspended in their safety harness. Additional tools as working seats and powered ascenders can be used to make working activities faster and more comfortable.

Important safety points related to our rope access activities are:

- A difference in rope access level and responsibilities, namely:
  - Level 1 Rope Access Technician
  - Level 2 Rope Access Technician (advanced)
  - Level 3 Rope Access Supervisor
- Rope access technicians are extensively trained and independently assessed;
- At least 2 independent anchorage points are used;
- Each rope access technician is attached to 2 independent ropes at any time;
- All tools and equipment are attached to the technicians or to additional ropes to minimize the risk of falling;
- A rope access team onshore consists of at least 2 technicians, 1 of whom is a Supervisor;
- A rope access team offshore consists of at least 3 technicians 1 of whom is a Supervisor;
- All rope access equipment is thoroughly inspected and maintained every 6 months;
- Prior to each working day all rope access equipment is briefly inspected;
- Strictly defined codes of practice and working methods are applied.
Your business is our business

MME Group focuses on letting its clients benefit from the use of rope access techniques to achieve cost reduction through safety and optimized working methods for almost every inspection, maintenance or repair works.

Safety
In our range of ideas the key to a successful completion of a project lies in maximum safety. Optimized procedures, our working methods and deliberated preferences are the basic principles for each project of MME Group. Within our projects a resourceful checklist for the following subjects will be handled to maximize safety:
- site surveys;
- working methods;
- risk assessments;
- Personal Protective Equipment;
- toolbox and evaluation procedures.

Staff
MME Group always ensures a high-quality staffing force for each project. Herewith MME Group bears in mind that the most efficient crew size will be scheduled to meet the expectations of its client.

MME Group uses a sophisticated “personal competence sheet” as an instrument to be able to assign all the knowledge, skills and competences needed on a project. To guarantee the level of knowledge, skills and competences, MME Group marks training and personal development as a high priority.
Reliable partner
The most important reason for MME Group’s leading position in the field of non-destructive testing, is our commitment to our clients, years of experience and long term partnerships for inspections, maintenance and repairs.

Our products and services are used worldwide daily. MME Group is a reliable partner for enterprises and organizations such as Shipping, Marine, Offshore, Petrochemical, (Renewable) Energy, Aviation and Civil Works.

We know the inherent demands of all these areas and respond with high quality cost-effective services and products that comply with all requirements of our clients.

MME Group

A Longer Life
With the use of our rope access techniques the following advantages are achieved:

- faster access to hard accessible work locations;
- less downtime during rope access techniques;
- marginal impact on other operational processes;
- cost effective in comparison with cherry pickers, scaffolding and other techniques;
- maximum safety and important safety points benefits.

MME Group provides its rope access services worldwide, in almost every imaginable situation and working environment. Additionally, the research method that MME Group ultimately uses will be adjusted to our client’s specific needs and expectations.
